## System 10 doors

System 10 offers a comprehensive range of residential, french and patio doors.

The residential doors have glazed or decorative 'in fill' panels and can have side panel options. Folding doors and stable doors are also available.

Designed for security, safety and weather performance, System 10 doors are impressive looking and impressive in action.

French doors or 'French windows' are enjoying a revival as a traditional alternative to the patio door.

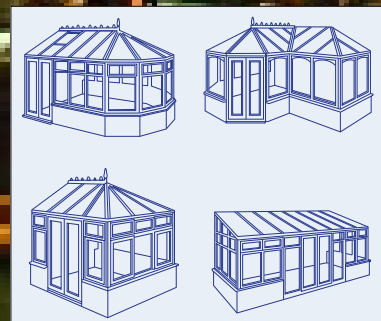

Patio doors are available in either 'in-line' versions where one door slides behind or in front of the other or 'tilt and slide' where the door offers extra ventilation by being tilted open, even though the door is shut.

## Conservatories

As well as making one of the finest ranges of replacement windows, System 10 frames are also used to create superb conservatories.

It's no surprise that a conservatory is now one of the most prized home improvements. It can transform the way you use your home, providing versatile additional space.

Of course, a conservatory is a significant investment and just like replacing your windows - you need to be sure of quality, service and value.

Quality PVC-U  
Windows, Doors  
& Conservatories

When you replace the windows in your home the choice is overwhelming!

Window companies are in the local papers, on the radio, even calling you on the phone at home.

## How do you choose?

Is price all that matters? Is a big 'national name' really any guarantee? And what about genuine customer service, not those pushy 'double glazing salesmen' you've heard so much about.

The truth is that not all PVC-U windows are the same; some are made from higher specification materials for higher quality, longer lasting performance.

Naturally we believe you won't do better than choosing System 10 windows and doors.

Designed and made to the highest quality standards, System 10 windows come with a first class pedigree - the resources of one of Britain's 'top' companies.

## Improved security

Crime is on the rise! With System 10 windows and doors you can certainly add to your 'home protection'. Start with a high quality frame, reinforced with galvanised steel as required. Then choose double glazed sealed units and the internal beading option. For a finishing touch you could use special 'high security' locks and security 'claws' to make your windows meet the latest official British Standard recommendations.

## Improved insulation

The 'low E' or 'K' glass in your new sealed unit will drastically cut the amount of heat leaving the room.

They will also cut out those draughts which can make sitting by the windows a real 'pain in the neck'.

## Safe & sure

Sometimes you may need a quick escape in the case of a fire or other emergency. System 10's options include 'easy open' locking handles with fast release; fully opening hinges to allow the window to give the widest possible opening. Plus for extra peace of mind we can supply safety glass where required.

## Noise Reduction

'Noise pollution' is one of the real menaces of today's world. Traffic, aircraft, trains or simply noisy neighbours can cause havoc.

Switching from single glazed windows to System 10 can cut noise transmission by up to 40 decibels with the correct specification, creating a quieter environment for peaceful living.

## Made to measure

With System 10 every single window and door is made to measure, exactly for your home.

A trained surveyor will take detailed measurements. There can be lots to decide but we help you all the way, so that you get exactly what you want!

## Customer service

From the minute you pick up the phone to ask to discuss your new window project, right through to installation and well beyond, our goal is 100% customer service.

It's not always easy and things can go wrong on any project. It doesn't happen often, but when it does, the important thing is we put it right fast...no arguments!

We only survive because customers recommend us to neighbours, friends, and colleagues, so your favourable opinion is all important to us!

## Beautifully installed

Relax. When you choose System 10 windows you'll hardly notice the professional installation team is there. We look after all the structural issues and installing the average window can take less than half a day, so no problems!

Every fitting team will be working to our Installation Code which means using dust sheets inside the house and cleaning up the mess when they've finished.

## Peace of mind

The most important reason for choosing System 10 windows is for peace of mind.

You'll know your home is fitted with high quality windows, with all the features that you wanted. And your home looks simply great!

You'll relax, knowing your home has added security, better insulation - for heat and noise - and is safe for all the family, including children.

It's the best of both worlds: a local company for local service, supported by national resources.

## Technical performance

The finished appearance of your new windows is all-important, but you also need to make sure 'beauty is not just skin deep'. PVC-U windows are a highly developed, 'engineered product, the result of continuous improvement and technical advances.

- Three and four chamber PVC-U profile represents the state-of-the-art in design and performance

- Metal reinforcing is used in many, but not all windows for superior rigidity and strength

- Full 70mm frame depth for extra rigidity and 'fit'. Many systems are much narrower

- 3mm thick external walls on the profile - again for quality. 'Thin wall' systems could 'flex' or be more easily prone to damage

- System 10 window profiles are approved to BS EN12608:2003 and, in the correct specification, are approved to BS7950 standard for enhanced security. The window profile is extruded in a modern centre assessed to ISO 9001 (BS5750)

System 10 windows have been successfully installed in thousands of homes nationwide, including highly demanding applications - you can be sure their quality is performance proven!

## Great appearance

First and foremost you want your home to look great!

Do you want the same styles and designs as existing windows or is it time for a change?

Either way, System 10 will fit the bill, with a huge range of styles, choices and options.

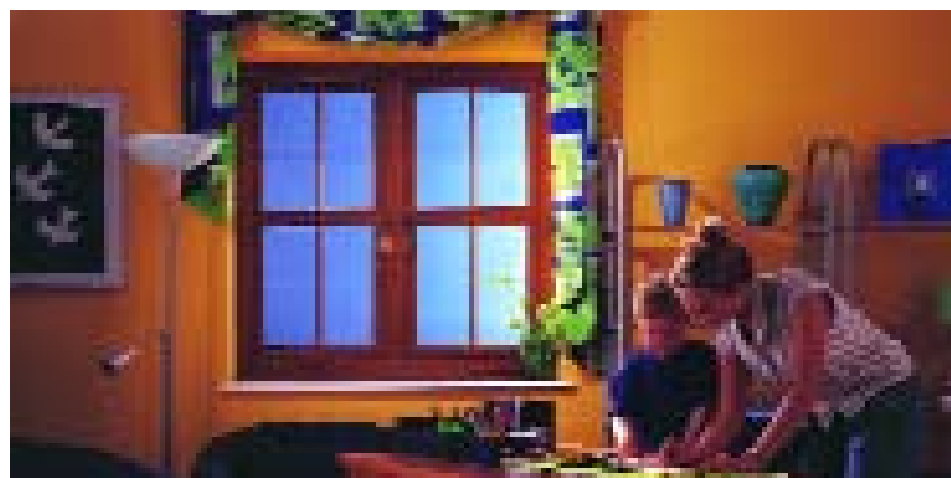

Do you prefer classic white or the attractive cherry or rosewood woodgrain styles?

And don't forget to ask about all the special features: glazing bars for that 'Georgian' look, leaded glass or even the highly popular decorative glass inserts to give your doors and windows a real 'sparkle!'.

## Low maintenance

No matter how good your windows look, let's face it, it's a real pain to keep them in 'A1 condition' when the winter frosts, rains and scorching summer sun has done its worst.

Fortunately, System 10's high grade PVC-U withstands all the rigours of the British climate and includes a special 'ultra violet' stabiliser, protecting your windows from sunlight.
